

# > QuipaLoop Product Overview

SIMPLE. SECURE. AGILE.

Today's fast moving businesses must respond to changing market needs as they occur. But often your ICT infrastructure and systems restrain how quickly your organisation can adapt. As a business leader you have to deal with the challenges of providing solutions that support your business's information needs and agility, keeping it safe from security threats and managing infrastructure and costs. Products and services that make this easy are invaluable.

QuipaLoop is the most simple and secure agile networking solution available today. It connects people and their business resources and services anywhere there is an internet connection, at any time, wherever they are. It does this by creating discrete loops between head office and its onsite workers, other sites such as branch offices, business partners, mobile workers and remote workers, then sharing the appropriate resources and services into these loops. Access is granted to each loop via a simple one-time Invite/Join process.

## Benefits at a glance

- > Support collaborative working by making resources and services available to the people that need them as they are needed simply and easily
- > Decision-making information and tools are available at the frontline where they are needed to empower staff
- > Achieve a higher ROI on network equipment by extending the reach of existing IT infrastructure and services with minimal capital expenditure
- > Connect where it is convenient without being restrained by the technology
- > Quick and simple business resource and network service management
- > Rapid response to security breaches
- > Conceal the complexity of underlying security from users
- > Support regulatory compliance requirement

## KEEPING IT SIMPLE

Designed with the user in mind, the complexity of Quipa's unique technology – used to create, aggregate and secure each connection – is hidden from the end user. In many cases no software need be installed on the user's computer; the browser-based management interface is so simple non-technical users can install it and within minutes have set up a loop and be using it. Installation, configuration and management are easy and there is no reliance on third-party processing, security protocols (i.e. IPSEC and SSL), VPNs and inbound firewall rules. This provides a fast, efficient service to your internal customers and frees you from administration overheads.

### BE SECURE

Discrete loops between people, resources, services and offices reduce exposure to security threats. All data transiting the loop is secured and each loop is independent of the underlying network infrastructure. QuipaLoop security is compartmentalised which means that if there is a breach in one QuipaLoop component, it will not automatically give access to other components. The ability to setup and easily dissolve loops on the fly, makes it simple to manage security administration around staff turnover and compromised access points.

### BE AGILE

QuipaLoop quickly connects people to their resources and services. It supports the collaborative working style essential to a dynamic, competitive business, allowing only the

people you choose both inside and outside of your organisation to become members of multiple loops at any given time. Businesses can set up project teams on the fly and provide secure sharing of information to mobile workforces, remote workers, partners and suppliers

### BE IN CONTROL

By making resources and services available to the people who need them when they are needed, QuipaLoop provides greater efficiency in resource management and decision making. It delivers greater ROI by extending the reach of existing IT infrastructure and services with minimal capital expenditure. There is no need for specialist hardware. No complex configuration is required to enable applications to share services – making deployment simpler.

## PRODUCT SPECIFICATIONS

Product	QuipaLoop	QuipaLoop EndPoint (COMING SOON)
What it does	QuipaLoop enables business agility by delivering your resources and services from any location to everywhere your people and partners need access. QuipaLoop is licensed to a specific company.	With QuipaLoop EndPoint you can share any of your devices, services and resources with anyone you want to share with. There is no central control point and you have full permissions over what you own.
System Requirements	<ul style="list-style-type: none"> <li>&gt; Internet Connection → 56 Kbps</li> <li>&gt; Microsoft Windows XP, Vista, 7, Server 2003, Server 2008</li> <li>&gt; 30MB of free disk space</li> <li>&gt; 256MB of computer memory</li> <li>&gt; No driver required for QuipaLoop (however some services such as SMB may require a driver).</li> </ul>	
Supported services	<ul style="list-style-type: none"> <li>&gt; Remote Desktop Protocols: Terminal Server, VNC, Remote Desktop PCAnywhere</li> <li>&gt; Internet Protocols: HTTP, HTTPS, SVN, FTP SFTP FTPS – both Active FTP and Passive FTP, Telnet, SSH</li> <li>&gt; Mail &amp; Messaging protocols: POP3, SMTP, IMAP, Jabber XMPP</li> <li>&gt; Applications: NI (SAP Protocol), Sharepoint, Lotus Notes, Exchange, Database - Oracle</li> <li>&gt; Media: SMB, MPEG4, MJPEG Video Stream</li> </ul>	
Encryption	AES256 bit encryption of all traffic
